

Roman Licursi

GTM ENGINEER | AI AGENTS, EVALS & REVENUE SYSTEMS

Madison, WI (open to relocation) | romanlicursi@gmail.com | [linkedin.com/in/roman-licursi-3aab2a160/](https://www.linkedin.com/in/roman-licursi-3aab2a160/) | [Portfolio](#)

Computer science senior who builds revenue systems in code. At an AI infrastructure company, shipped an internal AI agent for the GTM team behind a 60/60 regression eval suite, scaled the team's ABM app 10x on live Salesforce data, and built the contract lifecycle management integration for a new quote-to-cash process. Works across Salesforce, Clay, Snowflake/Hex and Python/TypeScript, and verifies every change against live data before rollout.

EXPERIENCE

GTM Systems Intern | Together AI

Apr 2026 – Present

- Built an internal AI agent for the GTM team that answers account questions from Salesforce, product usage, call transcripts and buying signals, with an automated eval suite that catches wrong answers before each release; cut heavy-query latency from 165 s to 6.3 s (26x).
- Scaled the team's ABM app 10x (129 to 1,319 accounts) on live Salesforce data, and found and fixed a 36% undercount on a VP-facing meetings metric before a leadership pipeline review.
- Built production automation in Clay, Slack and webhooks that enriches inbound leads and routes buying signals to reps.
- Built lead-scoring and reporting dashboards for demand-gen leadership in Hex and Snowflake; before rollout, showed the proposed MQL model would cut volume from 14,964 to 5,521 leads.
- Building Ironclad contract workflow and Salesforce integration for new quote-to-cash process; an approved quote generates the customer Order Form, replacing a hand-filled Word template with 20 blanks, and the signed contract syncs back to the Opportunity in under a minute.
- Supporting Salesforce Revenue Cloud (CPQ) rollout, including a working quote-to-contract prototype used in platform evaluation.

GTM Engineer | College & University Healthcare Education Consortium

Sep 2025 – Aug 2026

- Built and own outbound GTM infrastructure end to end, from lead sourcing and enrichment through deliverability and funnel reporting, as a one-person system.
- Designed AI-native sourcing and enrichment pipelines in Python, using local LLMs and public data to produce verified, high-intent contacts at scale without paid data vendors.
- Treated deliverability as an engineering problem, targeting sub-5% bounce and protecting sender reputation across a multi-mailbox, multi-persona campaign system.
- Automated funnel and conversion reporting so growth decisions run on live data, and partner with the founder on segmentation and go-to-market strategy.

Growth | Roger (YC S24)

Dec 2025 – Apr 2026

- Ran outbound growth experiments for a YC-backed AI SDR platform. Built prospect lists and launched LinkedIn and email campaigns, then used reply and conversion data to iterate sequences and brief growth leadership.

Data Analytics Intern | Community Action Partnership

Jul 2025 – Aug 2025

- Implemented internal tools, helping staff manage and engage with over 100 active community partnerships.
- Analyzed historical partnership data to identify engagement gaps, department trends, and regional disparities.

SELECTED PROJECTS

Autonomous Job Discovery System | TypeScript, Next.js, Postgres/pgvector, scheduled jobs, browser automation

Designed and deployed a production system that discovers roles across ~7,500 employer job boards and job-alert emails, deduplicates and scores each posting across eight weighted dimensions, and drives the application flow with browser automation behind human-approved guardrails.

Clay GTM Account Prioritization Workflow | Clay, Claygent, waterfall enrichment · [public template](#)

Public Clay workbook that finds high-fit software companies, enriches them with hiring, funding and infrastructure signals, and turns the research into a formula-scored, tiered account list with a verified work-email waterfall.

EDUCATION, LEADERSHIP & CERTIFICATIONS

University of Wisconsin–Madison | B.S. Computer Science

Expected Dec 2026

Leadership: Campus Ambassador, Clay (Jun 2026 – Present) · DECA International Finalist, top 8 worldwide in sales & marketing

Certifications: Agentic AI (DeepLearning.AI, 2026) · Claude Code in Action (Anthropic, 2026) · Revenue Operations (HubSpot Academy, 2025)

SKILLS

AI & Engineering: AI agents, LLM application development, evaluation frameworks, RAG/retrieval, prompt engineering, Python, JavaScript/TypeScript, React/Next.js, Node.js, Supabase/Postgres, Vercel, Git

GTM Systems & Data: Salesforce (Revenue Cloud/CPQ, SOQL, Flows, permissions, Data Loader), Clay, HubSpot, Snowflake, SQL, Hex, dbt, Tableau, Gong, Apollo, Ironclad CLM, lead scoring, enrichment, webhooks
